9. Precautions For Use of LCD Module	12

1. General Description

Item	Specifications	Unit
LCD Type	TFT, Transmissive, Normally White	-
Number of Dots	480x3(RGB)×272	dot
Display Color	16.7M	-
Color Configuration	RGB-Stripe	-
Screen Size	5.0(Diagonal)	inch
Active Area (W×H)	110.88×62.832	mm
Dot Pitch (W×H)	0.077×0.231	mm
Outline Dimensions (W×H×T)	120.7×75.8×4.0	mm
Viewing Direction	6:00	O'clock
Controller	ILI6480BQ or Equivalent	-
VDD	3.3	V
Data Transfer	24 Bits Parallel	-
Backlight	White LED	-
Touch Panel	4-wire Resistive	-
Operating Temperature	-20 to +70	°C
Storage Temperature	-30 to +80	°C
Weight	74	g

2. Block Diagram

3. Interface Specification

Pin No.	Symbol	Description					
1	LEDK	LED backlight cathode					
2	LEDA	LED backlight anode					
3	GND	Power ground					
4	VDD	Power supply (3.3V)					
5	R0	Red data (LSB)					
6	R1	Red data					
7	R2	Red data					
8	R3	Red data					
9	R4	Red data					
10	R5	Red data					
11	R6	Red data					
12	R7	Red data (MSB)					
13	G0	Green data(LSB)					
14	G1	Green data					
15	G2	Green data					
16	G3	Green data					
17	G4	Green data					
18	G5	Green data					
19	G6	Green data					
20	G7	Green data(MSB)					
21	В0	Blue data(LSB)					
22	B1	Blue data					
23	B2	Blue data					
24	В3	Blue data					
25	B4	Blue data					
26	B5	Blue data					
27	B6	Blue data					
28	B7	Blue data(MSB)					
29	GND	Power ground					
30	DCLK	Data clock. Latch data at falling edge					
31	DISP	Display on/off control. H: Display on L: Display off					
32	NC	No Connection					
33	NC	No Connection					
34	DE	Data enable. Active "H" to enable input data.					
35	NC	No connection					
36	GND	Power ground					
37	XR	Touch panel right side terminal					
38	YD	Touch panel down side terminal					
39	XL	Touch panel left side terminal					
40	YU	Touch panel up side terminal					

4. Absolute Waximum Ratings (Note 1	lute Maximum Ratings ((Note 1))
-------------------------------------	------------------------	----------	---

Item	Symbol	Min.	Max.	Unit	Remark
Supply Voltage (Logic)	VDD	-0.3	5.0	V	
Input Signal Voltage	VI	-0.3	VDD+0.3	V	
Supply Voltage (LED)	If	-	50	mA	
Operating Temperature	Тор	-20	70	°C	Note 2, 3
Storage Temperature	Tstg	-30	80	°C	Note 2, 3

Note 1: The absolute maximum rating values of this product are not allowed to be exceeded at any times. A module should be used with any of the absolute maximum ratings exceeded, the characteristics of the module may not be recovered, or in an extreme condition, the module may be permanently destroyed.

Note 2: 90% RH Max. (Max. wet-bulb temperature is 60°C)

Max. wet-bulb temperature is at 60°C or less. No condensation (no drops of dew).

Note 3: In case of temperature below 0°C, the response time of liquid crystal (LC) becomes slower and the color of panel becomes darker than normal one.

5. Electrical Characteristics

5.1 TFT LCD

Item	Symbol	Min.	Тур.	Max.	Unit	Remark
Power Voltage	VDD	3.0	3.3	3.6	V	-
Input Logic High Voltage	VIH	0.7VDD	-	VDD	V	-
Input Logic Low Voltage	VIL	0	-	0.3VDD	V	-
Current for LCD	IDD	-	30	40	mA	VDD=3.3V

5.2 LED Backlight

Item	Symbol	Min.	Тур.	Max.	Unit	Condition
LED Current	IL	-	40.0	44.0	mA	
LED Voltage	VL	17.4	18.0	19.2	V	Note 1
LED Life time	1	20,000	ı	-	Hr	Note 2

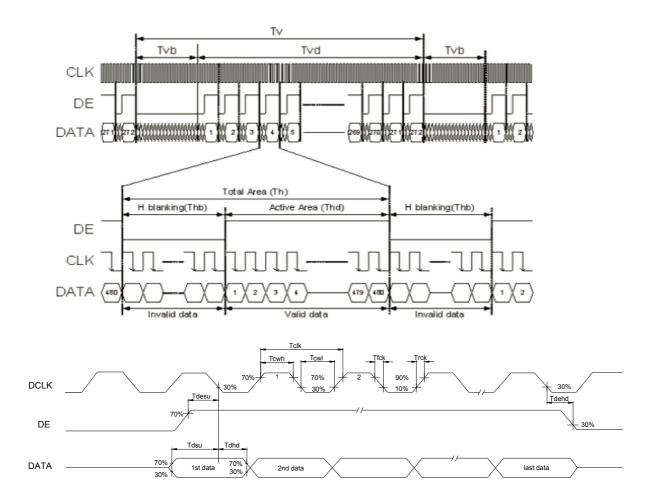

Note 1: The LED voltage is defined by the number of LED at Ta=25°C and IL=40mA.

Note 2: The LED life time is defined as the module brightness decrease to 50% original brightness at Ta=25°C and IL=40mA. The LED life time could be decreased if operating IL is larger than 40mA.

LED Backlight: 2x6 LED

5.3 AC Characteristics (VDD=3.3V, Ta=25°C)

Item	Symbol	Min.	Mid.	Max.	Unit	Remark
DCLK frequency	Fclk	7	9	12	MHz	
DEV period time	Tv	277	288	400	Н	
DEV display area	Tvd		272		Н	
DEV blanking	Tvb	5	16	128	Н	
DEH period time	Th	520	525	800	DCLK	
DEH display area	Thd		480		DCLK	
DEV blanking	Thb	40	45	320	DCLK	
DCLK cycle time	Tclk	83	110	200	ns	
DCLK width of high level	Tcwh	40	50	60	%	
DCLK width of low level	Tcwl	40	50	60	%	
DCLK rising time	Trck	-	-	9	ns	
DCLK falling time	Tfck	-	-	9	ns	
Data set-up time	Tdsu	10	-	-	ns	
Data hold time	Tdhd	10	-	-	ns	
DE set-up time	Tdesu	10	1	-	ns	
DE hold time	Tdehd	10	ı	-	ns	

6. Touch Panel Characteristics

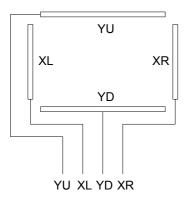

6.1 Electrical and Optical Characteristics

Item	Min.	Тур.	Max.	Unit	Remark
Linearity	-1.5	-	1.5	%	X and Y directions
Circuit Resistance	100	1	900	Ω	X direction
Circuit Resistance	100	1	900	Ω	Y direction
Insulation Resistance	20	-	-	МΩ	DC 25V
Operating Voltage	2.7	-	7	V	DC
Chatting Time	1	-	20	ms	
Transmittance	78	-	-	%	
Surface Treatment Anti-glare					

6.2 Mechanical & Reliability Characteristics

Item	Min.	Тур.	Max.	Unit	Remark
Activation Force	-	1	110	g	
Surface Hardness	3	1	-	Н	
Knocking Durability	1,000,000	-	-	times	
Writing Durability	100,000	-	-	words	

6.3 Touch Panel Circuit Diagram

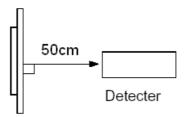

7. Optical Specification

Item	Symbol		Condition	Min.	Тур.	Max.	Unit	Note
Brightness	Вр		Θ=0°	-	160	-	cd/m ²	1
Uniformity	△Вр		Ф=0°	70%	-	-	-	1, 2
Viewing Angle	Hor	ΘR	- Cr≥10	-	55	-	degree	3
		ΘL		-	55	-		
	Ver	Θυ		-	40	-		
		ΘD		-	50	-		
Contrast Ratio	Cr		Θ=0°	180	300	-	-	4
Response Time	Tr + Tf		Ф=0°	-	30	45	ms	5
Color Coordinate	Wx		Θ=0° Φ=0°	0.26	0.31	0.36	-	1, 6
	Wy			0.28	0.33	0.38	-	

Test conditions: VDD=3.3V, IL=40mA (LED backlight current), the ambient temperature is 25°C.

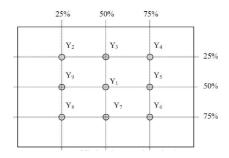

Note 1: The optical characteristics should be measured in dark room after 15 minutes operation. LCM displays full white. The brightness is the average value of 9 measured spots. Measurement equipment BM-7.

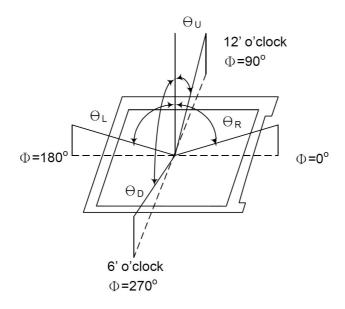

Note 2: \triangle Bp = Bp (Min.) / Bp (Max.)×100 (%)

Bp (Max.) = Maximum brightness in 9 measured spots

Bp (Min.) = Minimum brightness in 9 measured spots.

Note 3: Definition of Viewing Angle

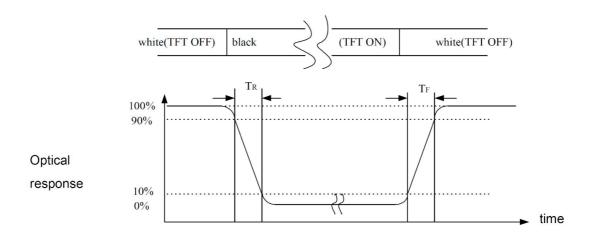

Note 4: Definition of Contrast Ratio

Contrast Ratio (Cr) = Luminance measured when LCD on the "White" state

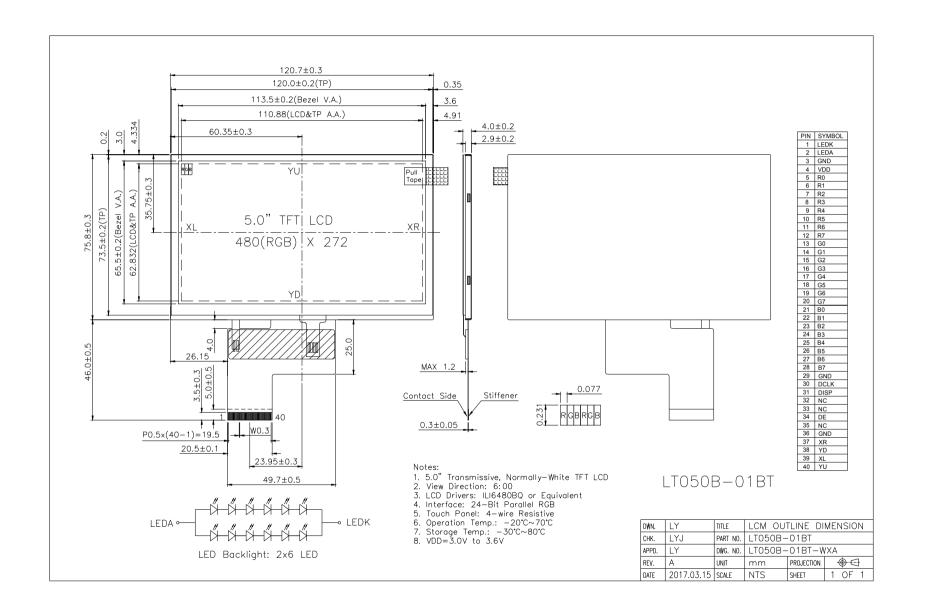

Luminance measured when LCD on the "Black" state

Note 5: Definition of Response Time

Note 6: Definition of color chromaticity (CIE1931) Color coordinates measured at center point of LCD.

Outline Dimension

9. PRECAUTIONS FOR USE OF LCD MODULE

9.1 Handing Precautions

- 1) The display panel is made of glass. Do not subject it to a mechanical shock by dropping it from a high place, etc.
- 2) If the display panel is damaged and the liquid crystal substance inside it leaks out, be sure not to get any in your mouth. If the substance comes into contact with your skin or clothes, promptly wash it off using soap and water.
- 3) Do not apply excessive force on the surface of display or the adjoining areas of LCD module since this may cause the color tone to vary.
- 4) The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarizer carefully.
- 5) If the display surface of LCD module becomes contaminated, blow on the surface and gently wipe it with a soft dry cloth. If it is heavily contaminated, moisten cloth with one of the following solvents.
- · Isopropyl alcohol
- · Ethyl alcohol Solvents other than those mentioned above may damage the polarizer. Especially, do not use the following:
- · Water
- · Ketone
- · Aromatic Solvents
- 6) When mounting the LCD module make sure that it is free of twisting, warping, and distortion. Distortion has great influence upon display quality. Also keep the stiffness enough regarding the outer case.
- 7) Be sure to avoid any solvent such as flux for soldering never stick to Heat-Seal. Such solvent on Heat-Seal may cause connection problem of heat-Seal and TAB.
- 8) Do not forcibly pull or bend the TAB I/O terminals.
- 9) Do not attempt to disassemble or process the LCD module.
- 10) NC terminal should be open. Do not connect anything.
- 11) If the logic circuit power is off, do not apply the input signals.
- 12) To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.
- · Be sure to ground the body when handling the LCD module.
- · Tools required for assembly, such as soldering irons, must be properly grounded.
- · To reduce the amount of static electricity generated, do not conduct assembly and other work under dry conditions.
- · The LCD module is coated with a film to protect the display surface. Exercise care when peeling off this protective film since static electricity may be generated.

9.2 Storage Precautions

1) When storing the LCD module, avoid exposure to direct sunlight or to the light of fluorescent lamps and high temperature/high humidity. Whenever possible, the LCD module should be stored in the same conditions in which they were shipped from our company.

2) Exercise care to minimize corrosion of the electrodes. Corrosion of the electrodes is accelerated by water droplets or a current flow in a high humidity environment.

9.3 Design Precautions

- 1) The absolute maximum ratings represent the rated value beyond which LCD module can not exceed. When the LCD modules are used in excess of this rated value, their operating characteristics may be adversely affected.
- 2) To prevent the occurrence of erroneous operation caused by noise, attention must be paid to satisfy VIL, VIH specification values, including taking the precaution of using signal cables that are short.
- 3) The liquid crystal display exhibits temperature dependency characteristics. Since recognition of the display becomes difficult when the LCD is used outside its designated operating temperature range, be sure to use the LCD within this range. Also, keep in mind that the LCD driving voltage levels necessary for clear displays will vary according to temperature.
- 4) Sufficiently notice the mutual noise interference occurred by peripheral devices.
- 5) To cope with EMI, take measures basically on outputting side.
- 6) If DC is impressed on the liquid crystal display panel, display definition is rapidly deteriorated by the electrochemical reaction that occurs inside the liquid crystal display panel. To eliminate the opportunity of DC impressing, be sure to maintain the AC characteristics of the input signals sent to the LCD Module.

9.4 Others

- 1) Liquid crystals solidify under low temperatures (below the storage temperature range) leading to defective orientation or the generation of air bubbles (black or white). Air bubbles may also be generated if the LCD module is subjected to a strong shock at a low temperature.
- 2) If the LCD modules have been operating for a long time showing the same display patterns, the display patterns may remain on the screen as ghost images and aslight contrast irregularity may also appear. A normal operating status can be regained by suspending use for some time. It should be noted that this phenomenon does not adversely affect performance reliability.
- 3) To minimize the performance degradation of the LCD modules resulting from destruction caused by static electricity, etc., exercise care to avoid touching the following sections when handling the module:
- · Terminal electrode sections.
- · Part of pattern wiring on TAB,
